Google

### Adminimizer Toolbar

The easiest tool for updating your Blog with Internet Explorer 6

### ashnews

a simple program using PHP/MySQL that allows you to easily add a news/blog system to your site

### AvantBlog

a very simple interface which will allow you to post to a blog from your Palm or WinCE device via AvantGo

### b2

A news/blog tool

### b2evolution

a multi-lingual, multi-user, multi-blog engine. It was developed to provide a free, feature rich, extensible, and easy-to-install solution for efficient Web publishing of information ranging from professional news feeds to personal weblogs. b2evo can easily be installed on almost any LAMP (Linux, Apache, MySQL, PHP) host in a matter of minutes

### Blog

An automatic web log program which allows you to update your site easily without the hassles of HTML editing and having to use a separate program to upload your work. Windows client freeware

### Blog Navigator

makes it easy to read blogs on the Internet. It integrates into various blog search engines and can automatically determine RSS feeds from within properly coded websites

### BlogAmp

a web audio player for bloggers. Blog-Amp can be positioned on a web page or displayed in a mini pop-up window. BlogAmp does not require listeners to use media player applications which means that everyone with a web browser can listen. For bloggers themselves it couldn't be any easier when it comes to managing, programming and tracking their Blog-Amp. Simply upload any recorded MP3 files to your secure online media manager

### Blogarithm

a web service that let's you subscribe to blogs and be notified by email when they have new content. Also has a tool to generate stickers you can add to your own blog to make it easy for readers to subscribe to you. A way to be reminded about blogs you read and to generate more views of your blog

### Blog (Web-Tagebuch)

Dies ist die Demonstration eines Webservice, der die Funktionalität eines blogs bereitstellt

### BlogBack

Allows visitors to comment on your weblog posts, without the need to host the service yourself

### Blogbox

Blogboxes provide exciting, instantly deployed functionality for your blog or Web site. They are free for non-commercial use

### blogBuddy

A small Windows client providing a front-end to the blogger.com

website

## BlogChat

a browser-based chat window that you can attach to your weblog or site. When you are online your visitors can engage in a text discussion with you in real time. The chat can be a popup window or you can embed it right in the page. All you have to do is put some links on your page, we provide the service. If you run PHP and mySql, you can host your own single blogchat by running the original free version. It has less features and requires your hands-on maintenance, but comes as source

## BlogCounter

Free comprehensive site statistics and web counter system for bloggers which tracks host/IP (both proxyfied & 'real' IP), referrers, Search Engine keywords, user agents, date & time, resolution & color, operating system, online time spent, page impressions, browsed page paths, currently online visitors and more!

## blogdex

System built to harness the power of personal news, amalgamating and organizing personal news content into one navigable source

## blogdexter

Will help you jump to the page on blogdex that displays the web addresses of people who have linked to your URL

## BlogFace

provides a weblog-style interface to a cataloged collection of objects, without requiring that the catalog or entries be modified, or even know about the BlogFace at all. It will work with any catalog and collection of entry objects, so long as the catalog provides an ISO format date attribute for each entry record

## BlogFlix

Use this blog and online service to add video effects (pan and zoom) to blog photos. Also delivers Flash video clips in a small frame in your blog.  Just paste a snippet of code to make movies appear. Supports all major blog hosting services

## Blogger FAQ blog

The blog formerly known as Blogger archive/template troubles, featuring fixes for problems with Blogger's archives, templates, and more

## BloggerBot

Blogger AIM client

## BlogHoster

written in PHP and uses a single MySQL database. The entire system includes no flatfile data storage, which means that backing up your system is as simple as downloading your MySQL database. To install BlogHoster, your server only needs PHP 4.2.0 or higher as well as an available MySQL database

## Bloglet

offers an email subscription service for your blog

## blogLinker

a free tool to manage your web links on your blog/website and to dramatically increase traffic to your site. It can be embedded anywhere in your web page and can be easily configured to fit the existing design of your site. blogLinker is the only tool of its kind

Instant Gratification
> a way to get AIM instant messages when someone reads your blog. Only requires adding a small fragment of HTML to the blog that you want alerts from

InTerra
> a blog engine, rather simple at first sight, but extremely powerful inside. Moreover it is extremely scalable and extendible thanks to 3tier architecture and high-end design guidelines

Jabber
> The first application of Jabber technology is an instant messaging system focused on privacy, security, ease of use, access from anywhere using any device, and interoperability with IM, phone, and web-based services

Jericho
> a Java-based weblogging tool which interfaces with the Blogger and Manila XML-RPC interface

jogger
> Powered by Jabber, this new weblog service (or blog) allows anyone to update their own personal journal through a normal Jabber client. Jogger is intended to demonstrate how Jabber can be used as a platform for application communication

Journaling Script
> Free CGI script for publishing your own journal or weblog

JustBlogIt
> a Mozilla / Firefox extension to allow easy right-click posting to a weblog. From any website your new blog post is only a right-click away

Link Feedback
> see and show where your visitors come from! - a very simple set of links that you can insert into your pages to automatically track incoming links and echo them back to people who visit your site. Basically it's automated link-exchanging, but hopefully with more interesting results - Sean Nolan

Link Hype
> where the intelliforge webminer bot post interesting links it finds

LiveJournal Meme Tracker
> From this page you can see the most popular URLs referenced recently on LiveJournal

Manila
> An Internet server application that allows groups of writers, designers and graphics people to manage full-featured, high performance Web sites through an easy-to-use browser interface

MarsEdit
> a weblog editor for Mac OS X that makes weblog writing like writing email—with spell-checking, drafts, multiple windows, and even AppleScript support

Master WebLog
> Written primarily for maintaining WebLog pages

monaural jerk
> Allows one or more authors to regularly publish content without

touching HTML. It has a nifty web-based editing/publishing sytem. It has a built-in search engine. And it is free for personal or corporate use, under the GPL: this is open-source software

Movable Type

Six Apart's powerful, customizable publishing system which installs on web servers to enable individuals or organizations to manage and update weblogs, journals, and frequently-updated website content

MozBlog

a tool to enable people to a blog with mozilla while they surfing

myMediaList.com

a free, web-based tool for all blogs. It lets you embed and remotely manage a list of music, books, films and computer games anywhere in your blog/webpage. Fully customizable design. Beats coding html; just copy and paste a single line of code

MySmartChannels

an Application Framework Server that lets anyone quickly and easily publish, organize, and reuse information in a secure Web environment. Beneath the MySmartChannels interface lies a powerful Web services platform that provides a solid foundation for corporate blogging, knowledge management (KM), enterprise collaboration (EC), and a collection of services for solving a wide variety of content-oriented problems. A FREE MySmartChannels User Account is available

NanoBlogger

a small developement & demo site for a small weblog engine

NewsBruiser

A simple but full-featured weblog management system. It is almost entirely self-contained, requiring nothing but SSI and Python (1.5.6 or greater) to be happy

Nucleus

allows you to easily maintain your own weblog(s) on your own server. It offers a system that is easy to install, but still offers maximum flexibility

Open Journal Project

Free, perl-based open journal script you install on your Web server to maintain a Web log or online diary

Particle Blogger

allows you to set up a blog in minutes just by entering your database settings and running the installer script. You can then begin blogging with automatic archiving of posts my month, an integrated RSS feed and the option to turn on static (search engine friendly) URLs. Requirements: PHP 4.x or above. MySQL 3 (4 recommended)

Personal Weblog

PHP/MySQL include file for adding a weblog to a home page. It is highly configurable and can be changed to fit any web page style

PhoneBlogger

a tool for publishing to a blog via a phone call. It is an automated voice application that first asks you for info about which pre-configured blog you wish to post to. After collecting the necessary information, PhoneBlogger records your audio message. Finally, it posts a blog entry that links to the recorded audio

PHPBloggerAPI

a PHP implementation of the Blogger XML-RPC API. The code is available as a collection of "free-standing" functions, or a fully OO class

PHP-Blogger

a free script for posting and sharing news, pictures and slideshows with your friends and family. It provides tools for posting and editing posts without the need for an FTP client. It provides authentication for a single-user and allows the user to customize certain aspects of the UI. Of course, since the script is open-source it can be completely modified from the ground-up for those who like to dabble in PHP scripting

## phpWebLog

A complete news-driven website package with lots of bells and whistles. A few features include interchangeable templates/themes, multilanguage translations, fully configurable web-based administration, rdf import/exporting, internal links / statistics pages, search / archiving capabilities, and more

## PikiePikie

A collection of CGI scripts, written in the Python language, with which to create collaborative web sites in the tradition of WikiWiki. Each page can contain its own weblog, and the page layout can be customised extensively. The latest version supports skins, or themes, with which visitors can select their preferred appearance for the site

## Ping-O-Matic

will let you send a ping to various weblog tracking services such as weblogs.com, blo.gs, Technorati, BlogShares, and more, to let them know that you have updated your content

## Pivot

a web-based tool to help you maintain dynamic sites, like weblogs or online journals. Pivot is released under the GPL so it is completely free to use. It is written in PHP, and does not require additional libraries or databases to function

an easy to use, open, cross-platform, web application for creating, managing, and publishing weblogs

Squishdot

Host your own weblogs with software similar to slashdot.org. Built as a plug-in module for the Zope Application Server

Tangelo

termed "web publishing with a twist," is a departure from most traditional weblog publishing tools. Instead of installing or using weblog software on an Internet web server, Tangelo is installed on the user's computer as a standalone application, providing much easier installation, greater weblog control, and ease of use. Tangelo streamlines organization of weblog text and images, and publishes the weblog to both an Internet web server and to the user's own computer for better control and backup. In addition, Tangelo features integration with NetNewsWire 2.0 for posting RSS news items.

telnet7 - Bloggy

simple and yet powerful web blogger for websites that use free webhosting services like Tripod, Angelfire, etc. telnet7 Bloggy is still in its alpha stages but can already be used

texting.com

"This is a simple concept. We tell people about cool websites. Sites are ranked by how many times our users add them. To make texting.com useful, you should join the fun. The more the merrier"

TextRouter

paste text to Blogger.com or Manila weblogs

thatware

Based on Apache/PHP3/MySQL

Thingamablog

a cross-platform, standalone blogging application that makes authoring and publishing your weblogs almost effortless. Unlike most blogging solutions, Thingamablog does NOT require a third-party blogging host, a cgi/php enabled web host, or a MySQL database. In fact, all you need to setup, and manage, a blog with Thingamablog is FTP, SFTP, or network access to a web server

thumblogger

with this tool you can blog picture galleries

Tinderbox

A personal content management assistant for making, analyzing and sharing notes. A tool for making Web logs and news sites. It's superb for collecting and understanding complex information. Tinderbox for Macintosh will ship in February 2002. Tinderbox for Windows will follow

tkblog

- free blogging application. standalone, cross-platform. does NOT require blogger.com, etc. or xml, or php/mysql, or running your own server

Tojo

an online collaborative journal/diary system written in PHP, allowing multiple users to add entries to a page, with a new page every day. It is designed for small groups in mind, and thus works differently from a BBS/forum or blog

TowerBlog

Fast & powerful weblogging program that runs on any server supporting PHP 4.1 or greater. Features a customizeable layout via CSS & templates, a fullly searchable archive & category system, as well as quick and efficiant backup and restores

Traction Software

The leading Enterprise Weblog software. Easy to use, secure blogging software designed for business and group use

Trellix

Create your own weblog using client-side windows based software. No HTML experience required

TypePad

a personal publishing service designed to provide a simple yet full-featured environment for you to put your thoughts, ideas, and experiences on the web, whether it be a weblog, journal, photo album, diary, or an entirely new creation. With TypePad, there's no installation or configuration required. Your website and all the tools are managed by the service, and upgrades and updates to the TypePad application are included in your service subscription fee

Userplane AV Blogger

an easy-to-use system allowing the creation of audio and video recorded messages for use in blogs, websites and email

Vanilla

simple and extensible hypertext system which subscribes to the Wiki philosophy and is written in Rebol

w.bloggar

Blogger API client
